

CARE AND OUTCOMES OF STROKE SURVIVORS admitted to **complex continuing care** and **long-term care** in Ontario in 2015

About 1 in 5 stroke survivors are admitted to **complex continuing care (CCC)** or **long-term care (LTC)** after an acute stroke. Most don't return to the community. Access to more intensive rehabilitation might improve that outcome and optimize quality of life.

Of the **1,085** stroke survivors admitted to **CCC**, **45.7%** were discharged to the community.

Of the **1,411** stroke survivors admitted to **LTC**, **10.8%** were discharged to the community.
